

Modernize Your IBM i Easier with BCD

The IBM i is a modern platform but it's often represented by programs with outdated interfaces. Your in-house programmers can give your IBM i a more strategic role with BCD's web modernization tools. Presto and WebSmart leverage your existing skills and proven code, making it faster and easier to create modern IBM i web applications.

Give Your Existing Green Screens a Web GUI

- Web enable all screens without source code changes.
- Use the Visual Editor to further enhance screens.
- Deploy from browsers - no other software required.
- Access from desktops, tablets and smartphones.

Rapidly Develop New Web Applications

- Develop IBM i, multi-platform and mobile web apps.
- Templates create the initial RPG or PHP, HTML & CSS.
- Leverage back-end RPG or COBOL programs.
- Visual and text-based HTML editors and debugger.

🗨️ We surpassed our original goals in our investment in BCD products. We now develop all our applications with WebSmart and give a web GUI to our green screens using Presto. BCD's support for mobile devices is a huge bonus for us!"
